

Wrightington Lower Limb Arthroplasty Symposium

DELEGATE FEEDBACK 2017

Very interesting. Found the format good. Discussion sessions really useful. Demos interesting and allowed hands on - really useful.

Really enjoyed the day. Good level of information provided – some familiar but excellent explanations of information and no assumption of knowledge. Faculty all approachable and helpful.

Practical templating session needed more time and supervision as the software is new to some delegates.

Enjoyed practical aspects, good balance between theory and practical.

Very informative, particularly enjoyed the practicals.

Long day but well broken up into various interactive sessions.

Very good, I enjoyed it.

Enjoyed the interactive sessions and multidisciplinary input.

Excellent day. Very interesting selection of lectures. Great to have a mixture of practicals, theory and clinical studies. May like to have a bit longer, but on less subjects. Many thanks for an interesting and informative day.

Course is fantastic, very interactive and informative. Amazing management. Good topics for the symposium and well delivered lectures.

Thanks, very informative.

Excellent course, thank you.

Absolutely fantastic course. Thank you. The course was very well organised and was in keeping with the stated objectives. The only think I would ask if it could be organised over a three day weekend rather than during the week as it was difficult to attend all three days.

This programme is just brilliant. My knowledge in foot and ankle was very limited and this has just opened my eyes. Foot and ankle surgery is a very interesting field and I would love to learn more on this subject.

All lectures and topics were fantastic. All presentations were very well delivered. Saw bone workshop was extremely useful. Overall a very very useful course.

Excellent course, lots of new information. Perfectly suited to my level of practice currently. Really approachable faculty.

Good session for exam prep. Topics were broad and covered a lot of topics from surgical trainee perspective. ? possibly more technical information on surgical technique.

Excellent course overall. Practical sessions break up lectures nicely. Great opportunity to handle kit.

Smaller breakaway discussion groups – make more interactive.
